Save a Life. **Right Here, Right Now.**

 **New York** *Blood Center*

Objectives

- Demonstrate the importance of phenotypes/genotypes in patients with warm autoantibodies
- Understand the role of adsorptions in warm autoantibody identification
- Discuss transfusion options available for patients with warm autoantibodies

Then the phone rang....

- Received call from a local hospital about a male patient in the ER
 - 3.2 gram Hgb
 - Patient currently hemolyzing
 - DAT 4+, plasma positive with all cells tested, only history of transfusion from 2009
 - Needing worked up **STAT**
 - Need to transfuse at least 1 incompatible unit while work up is being done

Once a sample is received...

Forward Typing			Reverse Typing	
Anti-A	Anti-B	Anti-D	A ₁ Cells	B Cells
4+	0	0	0	4+

	Poly	IgG	C'	Saline
DAT	3+	3+ ^s	4+	0

- ABO/Rh: A Negative
- DAT: Positive with IgG and complement

Plasma testing

		Rh					MNSs				Kell		Duffy		Kidd		Results		
		D	C	E	c	e	M	N	S	s	K	k	Fy ^a	Fy ^b	Jk ^a	Jk ^b	5' RT	LISS 37C	IAT

11	R ₁ R ₁	+	+	0	0	+	+	+	+	+	+	+	0	+	+	+	0	1+ ^w	3+
AC																	0	1+	3+

Time for adsorptions

- Since all panel cells are positive, we need to get rid of the warm autoantibody reactivity
- To make adsorptions easier, a phenotype is needed

	E	c	C	e	K	Fy ^a	Fy ^b	Jk ^a	Jk ^b	S	s
RBC's	0 (mf)	4+	1+ ^{mf}	4+	1+ ^{mf}	3+ ^s *	2+ ^{mf} *	4+	2+ ^{mf}	4+	3+ ^s *

- Phenotype revealed mixed field in almost all antigen typings

Reticulocyte cell separation

- Typically, when mixed field is observed, retics are acquired and tested...
- Due to the 3 g hgb, that wasn't an option

What's the need for a phenotype?

- Typically we adsorb with phenotypically matched, ficin treated cells
- Without a phenotype, adsorptions will be much more difficult and time consuming
- If transfusion is urgently needed, IRL will recommend giving phenotypically matched RBC's while workup is being done...

No phenotype, no problem

- Since a phenotype was unavailable, we can still do adsorptions
 - R1R1
 - R2R2
 - rr
- Number of Absorptions = Strength of reactivity + 1, for minimum of 10 min at 37C
- Run each adsorbing set in tandem, and test separately

Alloadsorbed plasma

		Rh					MNSs					Kell		Duffy		Kidd		R1R1	R2R2	rr
		D	C	E	c	e	M	N	S	s	K	k	Fy ^a	Fy ^b	JK ^a	JK ^b	LISS IAT	LISS IAT	LISS IAT	
1	R ₁ R ₁	+	+	0	0	+	+	+	0	+	0	+	+	+	0	+	3+	3+	3+	
2	R ₁ R ₁	+	+	0	0	+	+	0	+	+	0	+	+	0	+	0	3+	3+	3+	
3	R ₂ R ₂	+	0	+	+	0	+	0	+	0	0	+	0	+	+	0	3+	3+	3+	
4	Ror	+	0	0	+	+	+	+	0	+	0	+	0	0	+	0	3+	3+	3+	
5	r'r	0	+	0	+	+	+	0	+	+	0	+	0	+	0	+	3+	3+	3+	
6	r''r	0	0	+	+	+	+	0	0	+	0	+	+	+	+	+	3+	3+	3+	
7	rr	0	0	0	+	+	+	0	+	+	+	+	0	+	0	+	3+	3+	3+	
8	rr	0	0	0	+	+	0	+	+	0	0	+	0	+	+	0	3+	3+	3+	
9	rr	0	0	0	+	+	0	+	0	+	0	+	+	0	+	+	3+	3+	3+	
10	rr	0	0	0	+	+	+	+	+	0	0	+	0	+	+	0	3+	3+	3+	
11	R ₁ R ₁	+	+	0	0	+	+	+	+	+	+	+	0	+	+	+	3+	3+	3+	

What went wrong??

- Ficin treated cells usually enhance antibody uptake, but some antibodies are not removed
- Our next option is to repeat the adsorbing sets, but using untreated RBC's
 - This requires more antigen matching, and more time...

Alloadsorbed plasma with untreated cells

		Rh					MNSs					Kell		Duffy		Kidd		R1R1	R2R2	rr
		D	C	E	c	e	M	N	S	s	K	k	Fy ^a	Fy ^b	Jk ^a	Jk ^b	LISS IAT	LISS IAT	LISS IAT	
1	R ₁ R ₁	+	+	0	0	+	+	+	0	+	0	+	+	+	0	+	0	0	0	
2	R ₁ R ₁	+	+	0	0	+	+	0	+	+	0	+	+	0	+	0	0	0	0	
3	R ₂ R ₂	+	0	+	+	0	+	0	+	0	0	+	0	+	+	0	0	0	0	
4	Ror	+	0	0	+	+	+	+	0	+	0	+	0	0	+	0	0	0	0	
5	r'r	0	+	0	+	+	+	0	+	+	0	+	0	+	0	+	0	0	0	
6	r''r''	0	0	+	+	0	+	0	0	+	0	+	+	+	+	+	0	0	0	
7	rr	0	0	0	+	+	+	0	+	+	+	+	0	+	0	+	0	0	0	
8	rr	0	0	0	+	+	0	+	+	0	0	+	0	+	+	0	0	0	0	
9	rr	0	0	0	+	+	0	+	0	+	0	+	+	0	+	+	0	0	0	
10	rr	0	0	0	+	+	+	+	+	0	0	+	0	+	+	0	0	0	0	
11	R ₁ R ₁	+	+	0	0	+	+	+	+	+	+	+	0	+	+	+	0	0	0	

There's another issue...

- IRL likes to do no more than 4-6 adsorptions to prevent any dilution of the patient's plasma
- Due to the limited sample, the plasma adsorbed 4 times using Ficin treated cells was used again to do an additional 4 adsorptions with untreated cells...

Sample sent to NYBC

- Per the requesting facility, a sample was sent to New York Blood Center
- NYBC was able to provide us with a genotype:
C-, E-, c+, e+, K-, Fy (a+b-), Jk (a+b-), S+, s+
- With what little sample was available, NYBC was able to duplicate our results and confirm that there were no underlying alloantibodies.

In the mean time...

- Due to the patient's hemolysis, IRL recommended that transfusion be withheld unless utterly necessary
- Patient was stable at a 6.8 g Hgb 2 days later
 - units matching the patient's genotype were found and held
- Patient “pretty stable” 4 days later
- Additional units were not needed from CBC

Hgb Status

Work-up breakdown

- ABO/Rh
- DAT
- 1 Elution
- 1 Phenotype
- A total of 6 panels ran with 24 adsorptions
- A total of 10 hours of tech time

Further patient investigation

- 2007
 - Diagnosed with Lymphoproliferative disease
 - Wegner's granulomatosis – an autoimmune disorder
 - Subsequent renal failure – kidney transplant in 2008
- Patient was transferred from an outside facility due to jaundice and anemia
- Unfortunately the patient was unable to overcome the hemolytic event and passed away

Tips on what to transfuse when dealing with warm autoantibodies

- Random, Crossmatch incompatible unit(s)
- Random unit(s) tested with alloadsorbed plasma – will still be XM incompatible
- Phenotypically matched – becoming a preferred practice
